We generally do not produce waste. We do retain production samples use these for further analysis. The residues from our analyses are segregated into 5 different categories (basically).

1. The oil soluble products are returned subsequently to product.
  2. The water dispersible products are returned to their product.
  3. Non hazardous water samples, go down the drain
  4. Acids are segregated. -
  5. Caustics are segregated. -
- These are neutralized together  
and generally go down the drain,  
or into oil products.

In the past the oil, water, acid, amine and waters were just randomly combined. We have had this deep well injected and burned. It is our goal to recycle and eliminate any hazardous waste coming from our facility. At this time, our waste production (requiring disposal) has been all but eliminated. We reported to the Texas Water Commision 80 to 90% reduction- however, it appears we are doing better than this.

In 1984 we produced 6 drums of Waste, in 1985 we had 3 drums destroyed at Rollins Environmental, and for 1986 (as of this date) we have less than 5 gallons on hand of which, approximately half a gallon is not reusable back into our products.
